

Special Issue on Photogrammetry and Remote Sensing of the journal Geomatik Schweiz – September/October 2021

Call for Papers

Dear SGPF/SSPT members

As every year a special issue of Geomatik Schweiz is dedicated to Photogrammetry and Remote Sensing. Up to 2019, papers were published based on invitation. From 2020 the Council of SGPF/SSPT wants to select papers based on a call for papers. This call is open to all SGPF/SSPT members but also non-members (from academia, public and research institutions and private firms). Any topic on Photogrammetry and Remote Sensing is suitable. Papers on other topics of Geomatics will receive lower priority and can be published in the regular issues of the journal. The paper contents should not be too exotic and too scientific (avoid many equations) and should preferably relate to an important application. The special issue has 16 pages free of cost and usually 4 papers. Extra pages can be bought by the authors at a cost of 350 CHF per page. Papers should be preferably in only one language (English is also accepted) to avoid loss of precious page space.

If interested, please send via email an extended abstract of 600 words (you can add few figures and tables, if desirable) by June 25th to the editor of the special issue, Reik Leiterer, reik.leiterer@exolabs.ch. The abstract should cover all essential parts (aims, input data, methods, results and discussion). You can also send a full paper, if you have one.

Authors of selected abstracts will be notified by July 5th, together with more detailed instructions about the preparation of the manuscripts. The final full manuscript should be submitted to the editor by August 10th.

All deadlines are strict!

We are looking forward to your contribution and an interesting and useful special issue.

Council of SGPF/SSPT
